Write down (handwritten) the respective queries for each Qs. Answer should contain the screenshot of the execution

1. In a single output window, print odd numbers upto 20 using LOOP   [2]
2. Using DO-WHILE LOOP insert the following data into table "tourism" and show the table content.   [2]

ID	Place
2	Place3
4	Place5
6	Place7
8	Place9
10	Place11
12	Place13

3. Using paging and DO-WHILE display the "tourism" contents in three pages (o/ps).   [2]
4. Using procedure display the tuples of "tourism" where ID is either 4 or 8 or 12.   [2]
5. Create a new table "place_name" having only one field "name". Using nested stored procedure and DO-WHILE/LOOP copy the place name from the "tourism" table having ID = 2, 6, 10 and insert it to "place_name" table.   [2]
